

Poker UV

Effective and environment-friendly disinfection without chemicals.

UV-C radiation has a photolytic effect on DNA of microorganisms.

The purification effect is obtained with wavelengths below 320 nm, with maximum effectiveness at 260 nm. POKER UV germicidal lamps emit light at 254 nm, about 85% of maximum effectiveness. Ultraviolet (UV) purification is a very effective method to clean the air of biological pollutants such as:

- bacteria
- viruses
- fungal spores

UV germicidal lamps can be installed in ventilation ducts to clean the air passing through them. UV air purification is more economical and efficient than other air filtration and cleaning methods.

Materials: aluminium profile white end caps made of aluminium, aluminium reflector made of polished aluminium, satin on the outside.
