All business partners are carefully selected and adhere to our core values

- ✓ Customer focus
- ✓ Quality
- Reliability

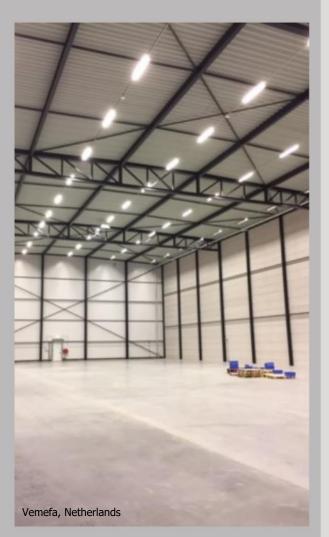

Our promise

Less costs, more revenue and a safer and more sustainable working environment. Because it is our passion, these themes drove us long before it had to (by law and environmental regulations).

Our values and goals

A sustainable world by being a market leader in industrial lighting solutions. And we do this by realizing tailor-made, reliable and sustainable lighting solutions for our customers. We focus on their specific needs, wants and desires, whilst always keeping our promises and we are uncompromising when it comes to quality.

Our customers

We work in a diverse range of industrial sectors, from factory halls to (harbor) cranes and (port) yards. From SME to multinational. Wherever our lighting solutions can make a difference to our customer's business operations and work environment. Our customers are the owners and users of industrial objects and premises. But also include installers of professional LED lighting. For them our technical lighting knowledge and experience is an addition to their expertise in the field of electrical engineering and installation.

Our team

Our team consists of highly motivated professionals with the right amount of experience and indepth knowledge in their respective field of expertise. We run the extra mile and never cut corners. We focus on results while never losing an eye on the human dimension. Being the best is more important than being the biggest. Work should be fun with lots of room for humor. Continuous personal and professsional development go hand in hand. The team goes before the individual. We help each other. We set our goals high, but reachable. We never compromise on quality. We deliver what we promise. We are honest.

Indoor industrial lighting

This includes factory halls, warehouses, workshops, and the like. From very tall buildings, like halls for ship building that require formidable high bay fixtures to work shops with lower ceilings for which light tracks are more suitable.

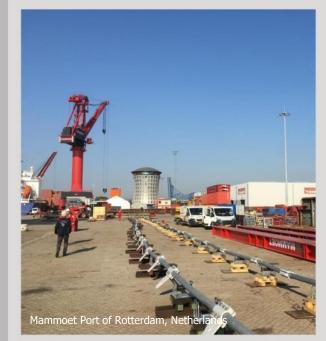

Crane lighting

Lighting fixtures for harbor cranes need to be extremely robust. They require similar specifications as for (port) yard lighting, but additionally they need to withstand (heavy) vibrations. Especially under the trolley, these fixtures have to endure heavy shocks and vibrations at different frequencies. We know about harbor cranes and we are proud to have been selected by Nanhua, world leader in harbor crane lighting, as their official European agent. Beside harbor cranes, there are a wide array of cranes, like construction cranes or indoor portal cranes, for which we offer suitable solutions.

Yard lighting

As of the start of Yourlight, we have accumulated much experience and expertise in yards and terminal lighting in ports all over the world. We supply fixtures from renowned manufacturers that are suitable for application in harsh environments with salty air, windy conditions, horizontal rain, dust and sand, as well as high ambient temperatures. From the North sea shore to the desert of Dubai. But we also have competitive solutions for a small yards or parking lots.

Specials

Yourlight provides solutions for very special areas of lighting. For instance in spaces with very high ambient temperatures, like foundries and steel production. Or with aggressive atmospheric conditions, like leather tanneries and stables for cattle.

An important market segments for which we have superb solutions is area's that need explosive proof ATEX certified fixtures. We have fixtures certified for all ATEX zones.

Is special cases we can provide one time tailor-made solutions in cooperation with one of our business partners (suppliers).

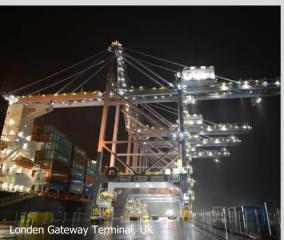

Yourlight products & services

It's our daily job to listen carefully to the needs, wants and desires of our customers in order to design a made-to-measure solution that caters to these. We give solid advice of which a light plan is the foundation.

Naturally, we apply the highest quality and most cost-effective fixtures to our lighting solutions, in order to achieve maximum return on investment for our customers. Furthermore, we to convey our customer's requirements and demands to our suppliers in order to help them developing better products. Simultaneously, we keep track of all technological developments in the market.
